

S4 BACnet-ecobee Integration

Integrating ecobee® IoT Devices with BACnet

SECURE

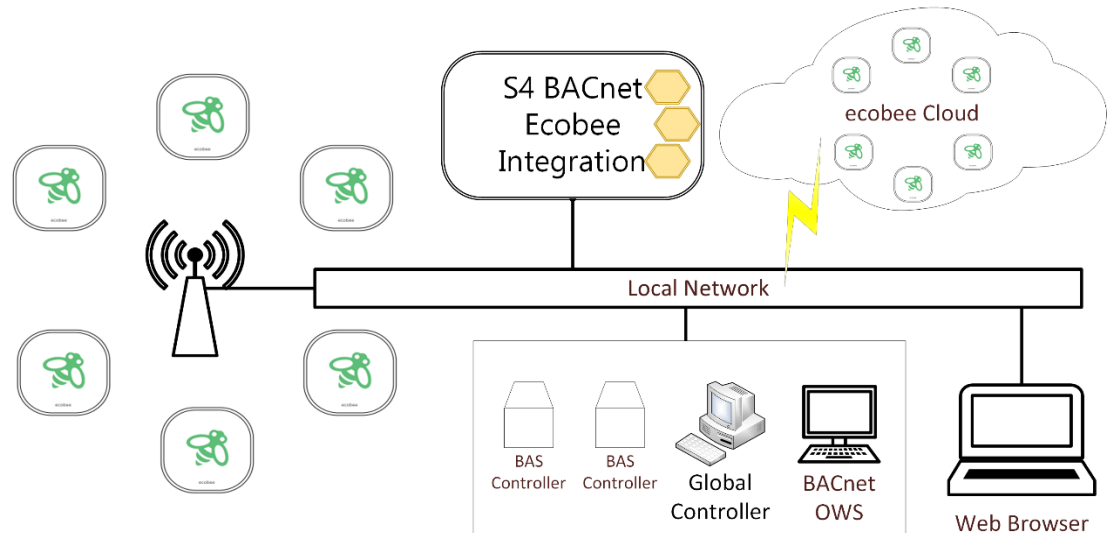

End to end encryption from the cloud to your client.

SIMPLE

Streamlined UI makes configuring and maintaining the system a breeze.

SCALABLE

Gives you the same ease of control over one or one thousand S4 ecobee Hives.

The S4 BACnet Ecobee Integration (a.k.a S4 ecobee Hive) connects to building ecobee® SmartBuildings accounts and discovers all defined buildings and thermostats. Each thermostat, and its attached remote sensors, are published as BACnet objects enabling full participation in open BACnet installations.

This solution retains all of the services, benefits, and flexibility of the ecobee® SmartBuildings technology, delivering the best of both IoT and the BACnet building automation standard.

Key Benefits

- Smart Thermostat installation, configuration, operation and services are unchanged
- Securely connects to the building's ecobee® SmartBuildings accounts via Ethernet TCP/IP
- Automatic thermostat discovery and configuration
- Publishes each thermostat as standard BACnet IP Annex J objects
- Full integration to the 16-level BACnet Priority Array
- Support for all BACnet clients including Demand – Response special requirements
- BACnet addendum AI is fully supported
- Commissioning wizard guides the installer through system installation and setup
- S4 Device Templates make configuration easy and highly customizable
- SmartBuildings Thermostat objects are readable and writable via BACnet
